Mountain Weather Forecast

Peak District National Park

Forecast valid from 00:00 on Sunday 19 Sep 2021 until 23:59 on Monday 20 Sep 2021

Forecast Issued on Saturday 18 Sep 2021 at 12:08

Confidence: There is some uncertainty in the details of rainfall and cloud cover through Sunday and more especially Monday, but there is good agreement for a change to windier and cooler conditions through mid-week.

Headline for Sunday 19 Sep 2021: A cloudy and occasionally wet day. Poor visibility on the hills.

Mountain weather hazards on Sunday 19 Sep 2021

Blizzards
No Likelihood

Heavy Snow
No Likelihood

Forecast for Sunday 19 Sep 2021

Weather: Cloud will thicken from the west through the early hours, shrouding the hills and eventually bringing spells of rain by dawn. This will leave a wet start with cloud over the hills as well as outbreaks of rain, some of which may be on the heavy side. Drier through mid to late afternoon but a few passing showers are possible. Cloudy but mostly dry through evening.

Chance of cloud free mountain/hill tops above 600m: 30% rising 50%.

Visibility: A dull, damp and rather hazy start with spells of rain limiting visibility in the valleys to a few kilometres and fog conditions up on the hills. Areas of cloud will be widespread above around 400m. Improving through late morning as cloud lifts and rain eases, but patches will persist above 500m through the day.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Be prepared for spells of heavy rain morning, mainly through the middle of the day, likely giving those in the hills a thorough soaking. Poor visibility may make navigation tricky.

Recent rainfall: measured at Cat & Fiddle: altitude 511m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Sat 18 Sep 2021	0mm	0.2mm	0.2mm

Forecast for Monday 20 Sep 2021

Weather: There is uncertainty in the forecast for Monday as a band of cloud and rain is expected to lie just east of the Peak District and is likely to edge westwards at times. The main hazard is likely to be areas of low cloud and poor visibilty associated with this. More reliably dry and bright conditions likely west of Buxton.

Maximum wind: West or northwest 10-15mph.

Chance of cloud free mountain/hill tops above 600m: 30% east, 70% west.

Visibility: Areas of cloud above 400m will edge westwards to affect eastern slopes while those to the west stay more reliably clear. There is some uncertainty over this, however. Spells of rain in the east will bring some haziness to lower slopes too.

Temperature: **Valleys:** Plus 12 Celsius rising to 18 Celsius.
At 600m: Around plus 12 Celsius.
Freezing level: Well above summits.
